Circular Motion Revision Sheet

Level 3 Sheet

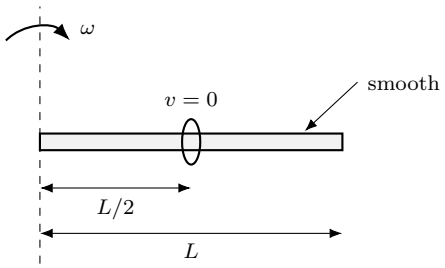

Note: Revise Class Notes + Do Last 5 Years of PYQ + These Sheets of Level 1 to 3.

1. The member OA rotates about a horizontal axis through O with a constant counter clockwise velocity $\omega = 3$ rad/sec. As it passes the position $\theta = 0$, a small mass m is placed upon it at a radial distance $r = 0.5$ m. If the mass is observed to slip at $\theta = 37°$, the coefficient of friction between the mass & the member is _____.

(1) $\frac{3}{16}$ (2) $\frac{9}{16}$ (3) $\frac{4}{9}$ (4) $\frac{5}{9}$

2. A ring which can slide along the rod are kept at mid point of a smooth rod of length L. The rod is rotated with constant angular velocity ω about vertical axis passing through its one end. Ring is released from mid point. Find the velocity of the ring when it just leave the rod.

(Note - Remember all results related to banking of roads, solve questions in which range of angular velocity is asked, insect in a bowl wale questions from notes.)

Keep Going!

"You have already come full circle in your preparation. Finish with confidence — your hard work will show."
